

Getting Started with Debugging in xTIME-composer Studio

This application note shows how to get started with debugging using the xTIMEcomposer studio. It shows you how to create and launch a debug configuration, set breakpoints, single step and inspect variable values during execution.

To get started, simply double click on *Getting Started with debugging in xTIMEcomposer Studio* in the Examples view, and click finish in the resulting import dialog. The sample project will then be imported and you will be switched to the XMOS edit perspective. The getting started pdf is then accessible from the *doc/pdf* folder at the top level of the imported project.

Required tools and libraries

- xTIMEcomposer Tools - Version 14.0

Required hardware

This application note is designed to run on any XMOS multicore microcontroller or the XMOS simulator.

Prerequisites

None
